

HP Smart Device Services Manager

Using the EWS (Embedded Web Server) option

EWS (Embedded Web Server) Configuration and use – 9th February 2018

Introduction

This document contains instructions and use cases to outline the use of the EWS (Embedded Web Server) access feature available in HP SDS Manager.

The Embedded Web Server access is a new feature of HP SDS Manager and is now available on all portals. It has to be enabled on a customer by customer basis and it is strongly recommended that the customer be contacted to give permission for the access to be enabled.

To enable access, go to the HP Smart Device Services tab on the customer and select the Enable/Disable Remote EWS Option. You can also see the status of the Remote EWS in the left-hand box

Remote Device EWS Access: Disabled

SDS Connectors

SDS Connector Id	Status	Version	Host Name	Host IP	Last Contact	Last Update from HP
4014	OK	4.1.3476	DESKTOP-PCVGPKP	192.168.0.46, 172.28.118.161	Feb 9, 2018 10:38:00 AM	Feb 9, 2018 11:03:56 AM

Operations Status

Operation Type	Submitted by	Last known status	Status last updated	Status last requested
UpdateCustomer	Feb 9, 2018 12:19:52 PM	Success	Feb 9, 2018 12:19:52 PM	Feb 9, 2018 12:19:52 PM

Actions

- Update Default HP Device Credentials
- Enable/Disable Remote EWS

When the Enable/Disable button is selected a Security Warning will be displayed, click the tick box and press Apply to enable Remote EWS. Please note the customer's permission to do this should be obtained.

Remote Device EWS Access

Security Warning

HP goes to great lengths to ensure the browsing session is secure; however, it is your responsibility to ensure a secure environment between the browser and HP cloud as well as obtain permission from the customer to use this feature to access HP printing devices within their network.

☒ Enable device Embedded Web Servers to be accessed remotely by authorised users.

I have the customer's permission to enable this feature, and will take responsibility for using it securely and sensibly.

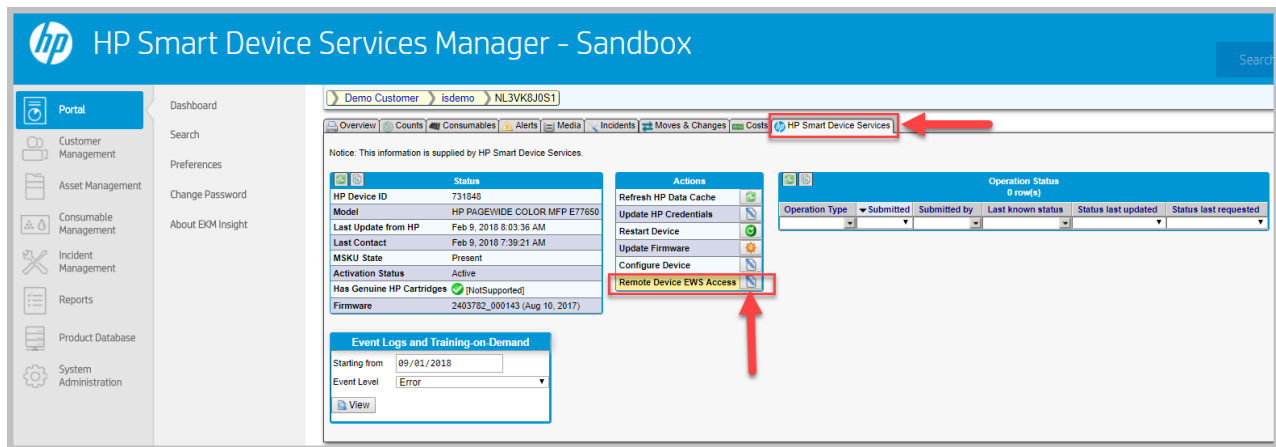

Apply Cancel

Remote Embedded Web Service is now enabled for this customer:

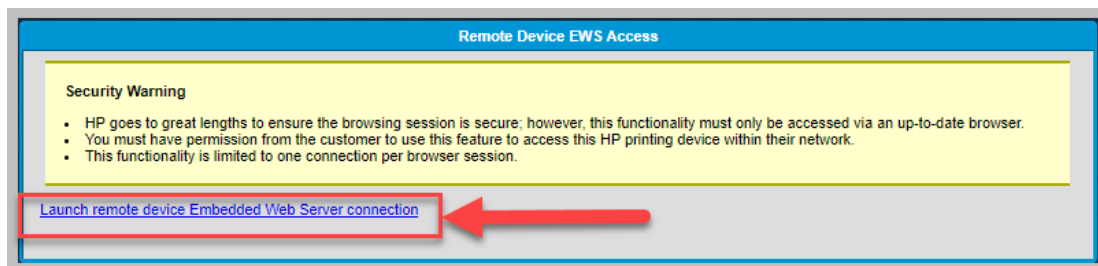

If you require further information or have any questions, please contact hpsds@ekmglobal.com

To access a Remote Embedded Web page, select the device that you wish to view and then select the HP Smart Devices Services tab

Then select Remote Device EWS Access

A further security warning will be displayed, click on the link to continue

This will then open a new browser tab and attempt to connect to the device, please note if the device is unavailable or turned off then the connection will fail.

This connection can take up to a minute to authenticate and connect and the message below is normal to see:

If you see a failed message like below then the device is probably turned off or the customer firewall is blocking access.

If you require further information or have any questions, please contact hpsds@ekmglobal.com

The web page displayed will be as if you were browsing to the web page from the local network, with the correct admin access right any configuration can be performed.

Change Settings

If you select a device in a customer that does NOT have Remote EWS enabled you will be given an option to enable the option via a pop-up window.

Remote Device EWS Access

Remote EWS has not been enabled for this customer, it can be enabled here

Enable/Disable Remote EWS

You can also disable access from the main customer screen by un-ticking the box from the Enable/Disable access option on the customer screen
